

Lab #1: HTML structure, Text and Images

Start by creating a new .html file in Sublime or any text editor. Develop a basic web page using the HTML tags you learned in class (focus on appropriate structure). Include each of the following in your web page:

1. Insert five lines of text with a title for that text and 2 words in italics and 2 words in bold, one subscript and one superscript.
2. Add an update and delete modification on the above text.
3. Insert a picture with specific dimensions (you choose the width and height). The alternative text for the image is "this is my first image".
4. Add a footer for the page with smaller font with the following text: "all rights reserved © 2022".
